SUMMARY

Electrical & Electronics Engineer transitioning to Front-End Development, leveraging 3 years of professional experience in industrial automation at Renault Group. Builds and ships production React applications with real users: independent projects have organically served over 8 million user interactions. Responsible for the full lifecycle of each, from architecture and performance to accessibility, deployment and the failures that surface only under live traffic.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), HTML5, CSS3, RESTful APIs, JSON handling, Canvas API, Web Audio, Intl API.

Frameworks & Styling: React 18 / 19 (Hooks, Context API, custom hooks, lazy + Suspense), React Router, Vite, CSS Modules, CSS Custom Properties, Tailwind CSS, Bootstrap, responsive mobile-first layouts.

Platform & Tools: Git, GitHub, GitHub Actions (CI), Cloudflare Workers / R2 / Turnstile, Firebase (Realtime Database, App Check), Netlify, Figma, i18n (ES / EN / PT), accessibility (ARIA, focus management).

PROJECTS *(selected from 30+ projects on my Portfolio)*

MAFIN Fandom: Media Archive | *React, Cloudflare Workers, R2, Headless CMS* | Live Demo | GitHub *(in progress)*

- Architected and deployed a bilingual (ES / EN) React SPA on Cloudflare Workers, serving static assets, a media API over two R2 buckets with conditional 304s, and a moderated user-submission endpoint.
- Cut the home page's initial payload roughly six-fold with build-time index generation and route-level code splitting.
- Opened the catalogue to non-technical editors via a headless CMS committing through the GitHub API, with one JSON file per record so concurrent edits never conflict, and fail-closed server-side Turnstile verification on submissions.

Slap Pelayo: Real-Time Global Clicker | *Vanilla JS, Firebase, Geo-IP APIs, i18n, reCAPTCHA* | Live Demo | GitHub

- Built and shipped a real-time clicker that organically reached 7.5M+ user interactions from users around the world, localized into three languages, with zero paid promotion.
- Synced every interaction to Firebase through atomic transactions so concurrent writes never overwrite one another, attributed each to a country via a four-API Geo-IP fallback chain, and hardened the write path with App Check and reCAPTCHA Enterprise.

Whack A Bianca: React Arcade Game | *React 19, Custom Hooks, Firebase, i18n* | Live Demo | GitHub

- Engineered a React arcade game around a data-driven character config, where a new enemy with its own sprites, spawn weight and on-hit effect is a single object literal that needs no branching logic anywhere else.
- Split the game loop into three focused custom hooks with the rules in pure, React-free modules, and added a live per-country Firebase leaderboard, Fisher-Yates shuffle-bag difficulty scaling and a bilingual (ES / EN) UI via Context.

Link-Sharing Profile App | *React.js, CRUD Logic, Drag & Drop, Form Validation* | Live Demo | GitHub

- Architected a React app with full CRUD over profile links, drag-and-drop reordering via @dnd-kit, and localStorage persistence that survives refreshes.
- Implemented per-field validation across the login, registration and link forms, covering email format, password rules and URL checks, feeding a live phone-mockup preview that re-renders instantly as the user edits.

PROFESSIONAL EXPERIENCE

OUTLIER.AI | *Remote, USA* **11 / 2024 – Present**

AI Training Specialist / Prompt Engineer (Mathematics & Logic)

- Evaluated and corrected AI-generated responses in advanced mathematics for accuracy and step-by-step reasoning.

OYAK RENAULT AUTOMOBILE FACTORIES | *Bursa, Turkey* **07 / 2019 – 05 / 2022**

Facility Design & Development Engineer

- Managed automation design projects for robotic facility lines, coordinating with international teams.
- **Digital Twin Project:** built virtual software representations of physical facilities for Industry 4.0.
- **Process Automation (RPA):** built bots that automated repetitive tasks and cut manual workload.

EDUCATION

Patika.dev | **Front-End Web Development Bootcamp** **06 / 2024 – 09 / 2024**

Self-Directed Front-End Study | *Online coursework during a deliberate career change* **2022 – 2024**

Anadolu University | **B.S. Electrical and Electronics Engineering (100% English)** **09 / 2013 – 06 / 2018**

- **High Honor Graduate:** Ranked 5th in the Department (GPA: 3.41/4.00).
- **AGH University (Poland):** Erasmus+ Exchange Program (GPA: 3.55).
- **English:** Professional working proficiency (TOEIC 945, 2019).
